License Plate Recognistion System

LPR 2000

Increase the security level of your parking facility. Integrated with our parking management system, LPR2000 captures and recognizes the license plate number of vehicles at the parking entrance, and verifies the license plate number again at the parking exit for a higher security control of a parking facility.

License plates of over 20 countries and in multiple languages including English, Chinese, Korean,Japanese, Thai, Spanish and Portuguese have been successfully recognized by LPR2000.

Program Features

- Maintains high recognition rate and speed in various lighting conditions (dirty, damaged or misplaced plates excluded).
- High quality images are stored in a database. Image data can be searched by ticket no., plate no., lane no. and entry time.
- Easy integration with other system databases or management software (ie. police stolen vehicle database system).
- Built-in database management module for vehicle information and reporting.
- Parking fee calculation for lost tickets (obtain entry time by searching license plate number).
- Vehicle theft prevention.
- Management on long stay or abandoned vehicles.
- Easy installation and maintenance.
