

Image Capturing System

An optional system function of IPMS2000 parking management system.

ICS2000

Simply mount the IP camera at Entry Terminal and Exit-POS, and with additional image capturing & verification software installed with our POS program at every Exit-POS (Cashier station at exit), you can increase the security of your parking system to another level with the least investment cost required!

Program Features

- Solution for countries with non-standard license plate to boost security level.
- Image captured and linked to parking ticket at entry.
- Image captured again and manually verified against entry image at exit-POS.
- Integrated with Parktron Pay-at-Exit parking system.
- Supports all parking ticket types - Mifare card, Chipcoin and Barcode.

※specifications are subject to change without notice.

Specification

IP Cam :

- High quality VGA CMOS sensor for excellent image quality.
- Built-in IR LEDs to capture video in low-light environments, or even complete darkness.
- Real-time H.264, MPEG4, and MJPEG compression.

Verification software :

- Would be installed in every Exit-POS computer integrated with POS program.
- Entry image(s) will be shown side by side with exit image(s) for manual verification. (Max. 2 images for any entry and exit).
- Manual confirm or automatic exit release can be configured.
